Superfast Wireless Broadband

# It's in your area - a revolutionary way to receive superfast broadband

## How it works

Our main Network transmits to community repeaters and from there we further distribute the broadband service to your premises. A small transceiver is fixed to a high point on the outside of your building in direct line of sight to our nearest repeater.

## Benefits of Wireless Broadband

There is no cable, which means there isn't the disruption of digging or the problem of cables being damaged, plus the broadband can be far reaching. You don't need to have a phone line and there's no need to be near an exchange - our service provides high performance without the speed drop off associated with wired broadband. It is reliable and unobtrusive.

This means that we can deliver increased speeds for regular internet users and we offer an unlimited usage service. Also, to give you peace of mind, we use a secure wireless encryption service so that your data is safe to transmit across our wireless network.

You can even take advantage of our Internet Telephone service that doesn't need telephone lines, so you save money from not paying line rental and also reduce your costs for UK Local and National or International calls.

**To register your interest, simply sign up for the service you require.**

**You are not bound by a Contract until your service has been delivered and installed.  
The more interest generated from within the community will help it reach you sooner.**
